

Enhanced Email Validation

"Anchor helped me correct and validate my email list, improving deliverability."

-eMarketing Manager

Enhanced Email Validation

Save time and money by identifying undeliverable emails on your database, before deployment.

Example Validation Output:

Sample Address:

john@yahoooo.com

Possible Email Corrections:

john@yahoo.com

Make your campaigns more successful by identifying, bounces, "screamers", and other invalid email addresses.

Anchor's Enhanced Email Validation services apply a series of algorithms that check the conformity of a domain, syntax, deliverability, and mailbox validity. We will flag "suspect addresses" and supply you with suggested corrections.

or your Sales Executive.

Capabilities

Anchor can help:

- Identify invalid domains, addresses, syntax errors, undeliverables and suggest possible corrections
- Detect spamtraps where possible, client opt-outs and additional suppressed email files including DMA's "Do Not Email" records
- Remove domains that cannot receive email

Benefits

Increase deliverability

Boost response

Improve ISP relationships

Recover lost email addresses

Build database accuracy

Save time & money
